

## Experiment 10

**Aim:** To-Do List

**Theory:** This mini-project revolves around the development of a user-friendly web-based to-do list application, employing the power of React and JavaScript. The primary aim is to craft an intuitive and visually pleasing user interface that enables users to seamlessly add, edit, and remove tasks, thereby enhancing their task management experience.

**Output:**

**Conclusion:** In summary, the development of the Simple To-Do List Web App using React and JavaScript successfully delivers an intuitive, versatile tool for task management. The project fulfills its objectives by providing an accessible user interface, dynamic task management, cross-device compatibility, and data persistence.
